

the 2nd international workshop for contents creation activity support with pervasive computing (PerCas) May 11th, 2009
exploring potential spaces of photo - through visualizing experience

about workshop

takeshi sunaga

[fukino's question]

- How do we appreciate our photographs (photos) towards the digital era?
- Did you make a family photo album in recent years?
- How many image files in your PC?

[workshop concept]

- Photos are visual mappings of our experience.
- Photos reflect our self at the experience.
- The reflection draws what I/we see, where and when I am/we are, what I/we do and who I am/we are.
- A family photo album has been fading out from my living room.

[design method applied to this workshop]

- Information Design approach shows designing experience first then designing system last.
- This workshop allows you to explore the potential spaces of photo with the design approach.
